## Tizen.IoTivity.Connectivity

w/ clouds

박정훈

# Resource Connectivity Controller

- **Resource**
  - represents real state content
  - collects data
  - Sensors, LED, ...
- **Connectivity**
  - connectivity of devices
  - integrated into communication networks
  - local network or cloud network
- **Controller**
  - controls resources and connectivity
  - mainloop

# Background

## REST(Representational State Transfer) API

- (별도의 전송계층을 사용하지 않고) HTTP를 이용하여 서버와 클라이언트간 통신 방법
- 3가지 구성요소 (Resource, Method, Message)

### 1. Resource

"http://webserver/api" 같은 형태의 URI(Uniform Resource Identifier)

### 2. Method

HTTP 프로토콜의 4가지 method 사용 : CRUD (Create, Read, Update, Delete)

- POST(Create), GET(Read), PUT(Update), DELETE>Delete)

### 3. Message

text, file 등 다양한 형태가 가능하나 JSON, XML 등 형식의 메시지를 일반적으로 사용

# Background

## Libcurl

- URL기반의 데이터 전송 라이브러리
- HTTP, HTTPS, FILE, FTP, FTPS.... 등등 지원
- POST method 사용 예제

```
#include <curl/curl.h>

int web_util_noti_post(const char *url, const char *json_data)
{
    int ret = 0;
    CURL *curl = NULL;
    CURLcode response = CURLE_OK;
    struct curl_slist *headers = NULL;

    curl = curl_easy_init();

    headers = curl_slist_append(headers, "Accept: application/json");
    headers = curl_slist_append(headers, "Content-Type: application/json");

    curl_easy_setopt(curl, CURLOPT_URL, url);
    curl_easy_setopt(curl, CURLOPT_POST, 1L);
    curl_easy_setopt(curl, CURLOPT_HTTPHEADER, headers);
    curl_easy_setopt(curl, CURLOPT_POSTFIELDS, json_data);

    response = curl_easy_perform(curl);

    curl_slist_free_all(headers);
    curl_easy_cleanup(curl);

    return ret;
}
```

# Background

## Libcurl

- GET method 사용 예제

```
#include <curl/curl.h>

int web_util_noti_get(const char *url, char **response)
{
    int ret = 0;
    CURL *curl = NULL;
    CURLcode response = CURLE_OK;

    curl = curl_easy_init();

    curl_easy_setopt(curl, CURLOPT_URL, url);
    curl_easy_setopt(curl, CURLOPT_WRITEFUNCTION,
                    _get_response_write_callback);
    curl_easy_setopt(curl, CURLOPT_WRITEDATA, (void *)response);

    response = curl_easy_perform(curl);

    curl_easy_cleanup(curl);

    return ret;
}
```

```
static size_t _get_response_write_callback(void *ptr, size_t size,
                                           size_t nmemb, void *data)
{
    size_t res_size = 0;
    char **received = (char **)data;
    res_size = size*nmemb;

    if (received && res_size > 0)
        *received = strdup((char *)ptr, size*nmemb);

    return res_size;
}
```

# Background

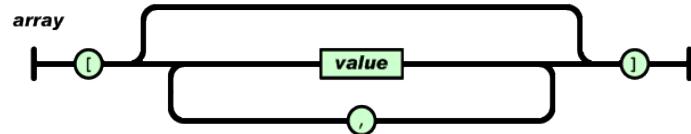

## JSON(JavaScript Object Notation)

- JavaScript에서 생겨났지만, Data 교환을 위해 언어 독립적으로 사용 중
- 구조

- 예제

```
{  
    이름 : 홍길동,  
    학과 : 컴퓨터공학과,  
    수강과목 : [인공지능, 알고리즘],  
}
```

# Back to Connectivity

## Connectivity APIs

### - Initialize

```
int connectivity_set_protocol(connectivity_protocol_e protocol_type);
int connectivity_set_resource(const char *path, const char *type, connectivity_resource_s **out_resource_info);
```

controller.c

```
static bool service_app_create(void *data)
{
    app_data *ad = data;
    .....
    ret = connectivity_set_connectivity_type(CONNECTIVITY_TYPE);
    .....
    ret = connectivity_set_resource(PATH, TYPE, &ad->resource_info);
    .....
    return true;
}
```

CONNECTIVITY\_PROTOCOL\_HTTP

```
typedef enum {
    CONNECTIVITY_PROTOCOL_DEFAULT = 0,
    CONNECTIVITY_PROTOCOL_IOTIVITY,
    CONNECTIVITY_PROTOCOL_HTTP,
    CONNECTIVITY_PROTOCOL_MAX
} connectivity_protocol_e;
```

"/door/???"      "org.tizen.door"

※ finalize - void connectivity\_unset\_resource(connectivity\_resource\_s \*resource);

# Back to Connectivity

## Connectivity APIs

### - Notify sensing data

- API for simple data

```
int connectivity_notify_bool(connectivity_resource_s *resource_info, const char *key, bool value);
int connectivity_notify_int(connectivity_resource_s *resource_info, const char *key, int value);
int connectivity_notify_double(connectivity_resource_s *resource_info, const char *key, double value);
int connectivity_notify_string(connectivity_resource_s *resource_info, const char *key, const char *value);
```

- API for complex data

```
int connectivity_attributes_add_bool(connectivity_resource_s *resource_info, const char *key, bool value);
int connectivity_attributes_add_int(connectivity_resource_s *resource_info, const char *key, int value);
int connectivity_attributes_add_double(connectivity_resource_s *resource_info, const char *key, double value);
int connectivity_attributes_add_string(connectivity_resource_s *resource_info, const char *key, const char *value);
int connectivity_attributes_notify_all(connectivity_resource_s *resource_info);
int connectivity_attributes_remove_value_by_key(connectivity_resource_s *resource_info, const char *key);
int connectivity_attributes_remove_all(connectivity_resource_s *resource_info);
```

# Back to Connectivity

## Connectivity APIs

- Notify sensing data

controller.c

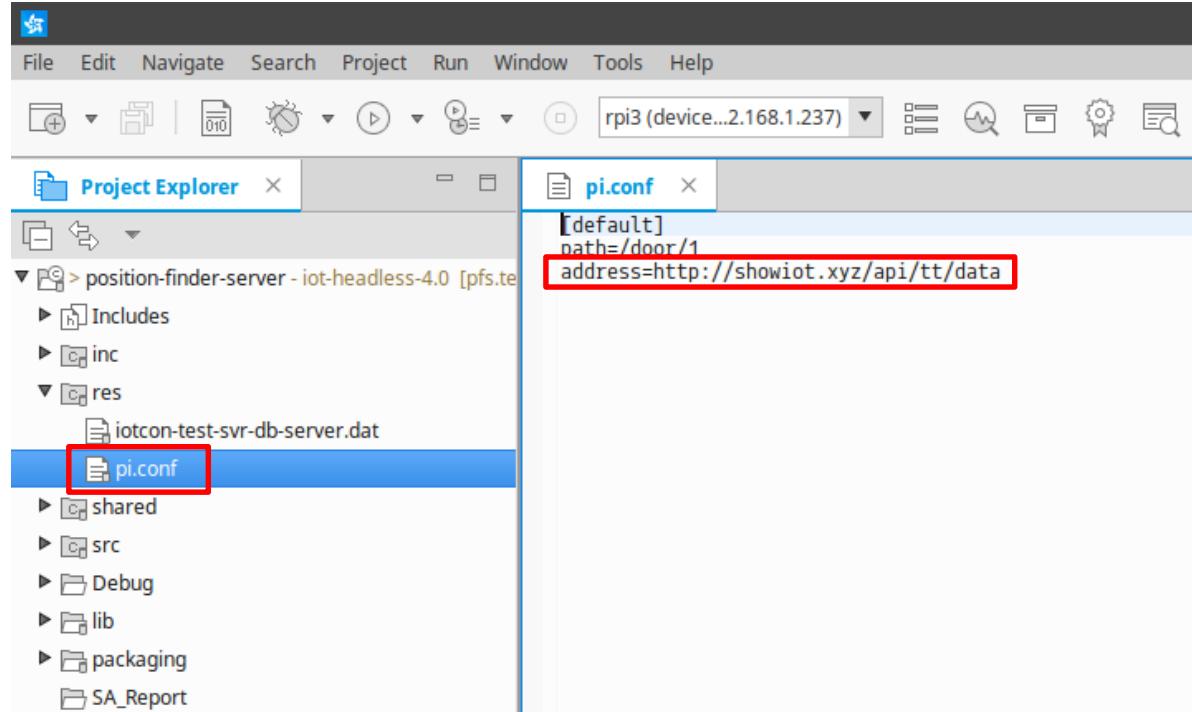

```
static Eina_Bool _control_sensors_cb(void *data)
{
    app_data *ad = data;
    int value = -1;
    .....
    ret = resource_read_infrared_motion_sensor(21, &value);
    .....
    ret = connectivity_notify_int(ad->resource_info, KEY, value);
    .....
    return ECORE_CALLBACK_RENEW;
}
```

↑  
"Motion"

# Back to Connectivity

## URI for REST API

- pi.conf 파일의 address 항목에 정의

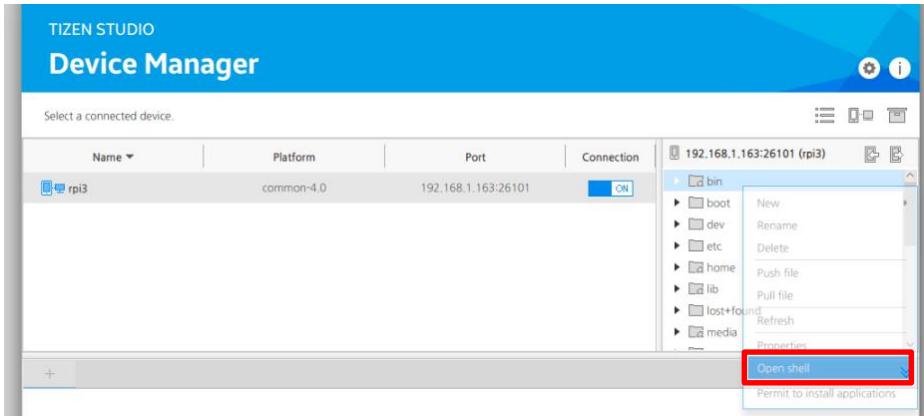

# Runs your code on RPi3

1. Running the project on RPi3.

Run > Run As > ...

2. How to open the shell.

```
sh-3.2$ su  
Password:  
bash-3.2#
```

\$ su  
Password : tizen

The terminal window shows a root shell session. The user runs 'sh -3.2\$ su' and enters the password 'tizen'. The password is shown in a red box. The terminal then displays the prompt 'bash-3.2#'. Below the terminal window, a text box contains the command '\$ su' and the password 'tizen'.

3. How to view logs.

Execute *dlogutil* in the opened shell.

```
$ dlogutil <LOG_TAG> ex) dlogutil TT
```

```
[connectivity_notify_int:655] Notify key[Motion], value[10]
[web_util_noti_post:98] server : http://showiot.xyz/api/tt/data
[web_util_noti_post:99] json data : {"SensorPiID":"/door/1","SensorPiType":"org.tizen.door","Motion":10}
[_post_response_write_callback:48] POST response : "values: \\"SensorPiID\": \"/door/1\", \"SensorPiType\": \"org.tizen.door\", \"Motion\":10}, time: 2017-11-07T06:30:38
```
